**Sponsor**                      CSIR-NAL

**Approval**                      Chairman, Systems Engineering Cluster

**Remarks**                      x

**Keywords**                      Metamaterial cloak, Optical Cloak, Plasmonic Cloak, Acoustic Cloak

## Abstract

*A cross-indexed bibliography for the invisibility cloaks is presented in this report. The database comprises of a systematic arrangement of the available open domain literature pertaining to the science and technology of the metamaterial, optical, plasmonic and acoustic cloaking. The references are classified from different perspectives such as acoustic, plasmonic, optical, metamaterial, etc., followed by the indexing of the various themes therein (e.g., properties, structures, measurements, review, etc.). The Author and Source indices are also listed. An exhaustive subject index has also been prepared for all the papers listed in this bibliography. This report is expected to provide a comprehensive source for systematically referencing the science and technology of invisibility cloaking applications from varied perspectives.*
